Web server security

Security considerations

All users must have read/execute permission to the above web site/applications directories.

If for example Everyone is used to provide access to web site/applications then TS will ensure that only users that are registered in LdapUserGroups will have further access to information.

WebDAV root folder

Users need read permissions to this folder due to behavior of Microsoft WebDAV client, otherwise user windows workstation may not be able to connect to WebDAV storage.

Security will however be restricted on WebDAV sub-directories.
